

400Y Series

Hydraulically Operated Anti-Columning Pressure Control Deluge Valve

Model: FP 400Y 1MC

The BERMAD model 400Y-1MC is an elastomeric, hydraulic, line pressure operated deluge valve, designed specifically for advanced fire protection systems and the latest industry standards.

The 400Y-1MC is activated by a hydraulic relay valve which latches the deluge valve open until reset locally.

An integral pressure reducing pilot valve ensures a precise, preset and stable downstream system water pressure. The 400Y-1MC is suitable for systems with open nozzles with a high pressure water supply for water or foam

Benefits and Features

Safety and reliability

discharge.

- Time proven, simple, fail-safe actuation
- Single piece, rugged elastomeric diaphragm seal -VRSD technology
- Obstacle-free, uninterrupted flow path
- No mechanical moving parts
- □ Latches open: remains open until reset locally
- Valve position limit switches

High performance

- Very high flow efficiency
- Straight through flow Y- type body
- Approved for PN25 / 365 psi

Designed for fire protection

- □ Face-to-face length standardized to ISO 5752 / EN558-1
- Meets the requirements of the industry standards

Quick and easy maintenance

- In-line serviceable
- Quick cover removal without detaching control trim*
- Swivel mounted drain valves*
- * not including 11/2" & 2" valves

Typical Applications

- High Pressure water supply
- Automatic water spray
- Foam applications
- Corrosive water systems

Approvals

UL-Listed
Special System Water Control
Valves Deluge Type (VLFT)

Det Norske Veritas Type Approval

ABS

American Bureau of Shipping Type Approval

Lloyd's Register Type Approval

Factory Fitted Options

- Valve position limit switches
- Water motor alarm
- Stainless steel seat ring
- Sea water compatibility
- Downstream drain valve
- Alarm pressure switch
- Adjustable water column offset feature

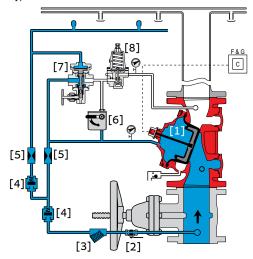

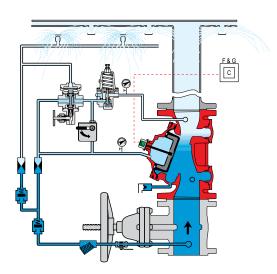

Model: FP 400Y - 1MC 400Y Series

Operation

(for Illustration Only)

Valve Closed (normal conditions)

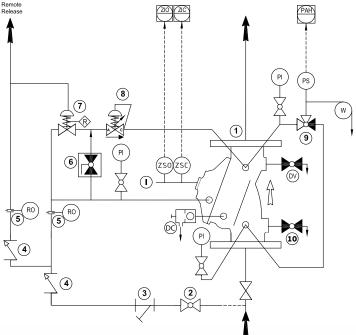

Valve Open (fire conditions)

The BERMAD model 400Y-1MC is held closed by water pressure in the control chamber [1]. Upon release of pressure from the control chamber, the valve opens.

Under NORMAL conditions, water pressure is supplied to the control chamber via the priming line [2] and strainer [3] and is then trapped in the control chamber by a check valve [4], restriction orifice [5], manual emergency release [6] and a latching relay valve (URV - M) [7], that is held closed by water pressure supplied by the pilot line head. The water pressure trapped in the control chamber of the deluge valve holds the diaphragm against the valve seat sealing it drip-tight and keeping the system pipes dry. Under FIRE conditions, water pressure is released from the control chamber, either with the manual emergency release, or by the URV switching to the release position in response to a drop in pressure in the pilot line caused by one or more of the fusible plugs opening. This latches the 400Y1MC deluge valve open, allowing water to flow into the system.

The pressure-reducing pilot valve [8] senses changes in outlet pressure and modulates the main valve to maintain the set downstream pressure. When outlet pressure changes, the pressure-reducing pilot opens or closes in response. This regulates the pressure in the main valve's control chamber, thus modulating the position of the diaphragm seal disk to maintain the set downstream pressure.

System P&ID

Components

- 1 BERMAD 400Y Deluge Valve
- 2 Priming Ball Valve
- 3 Priming Strainer
- 4 Check Valve
- 5 Restriction Orifice
- 6 Manual Emergency Release
- 7 Latching Pilot Valve (URV-M)
- 8 Pressure Reducing Pilot

Factory Fitted Options

- ZS Limit Switch Assembly
- l Visual Indicator
- DV Additional Drain Valve
- DC Automatic Drip Check Valve
- W Water Motor Alarm
- PI Pressure Gauge
- PS Pressure Switch
- 9 3-Way Alarm Test Valve
- 10 Drain Valve

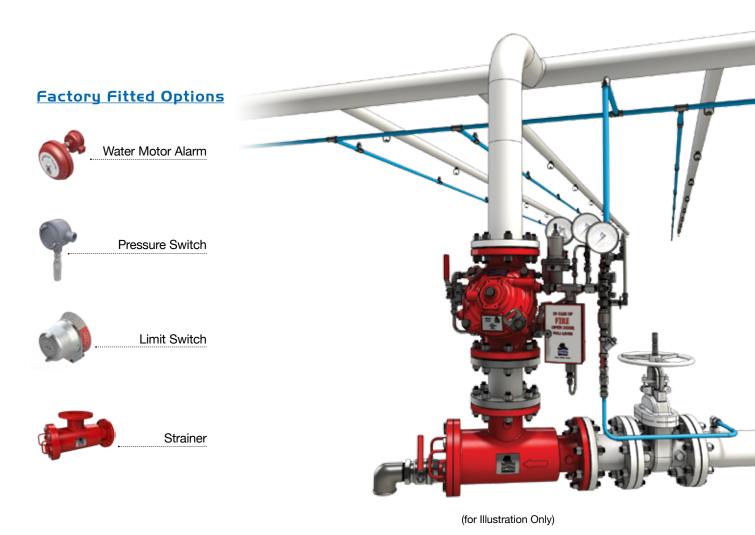

Model: FP 400Y - 1MC

400Y Series

System Installation

A typical installation of the BERMAD model 400Y-1MC features automatic actuation via a hydraulic universal relay valve, triggered by a fusible plug loop. A pressure reducing pilot valve integrated in the trim ensures a precise and stable pre-set downstream pressure. When fitted with a limit switch the valve can send a feedback signal to a remote valve position monitoring system.

Engineering Specifications

The deluge valve shall be a UL-listed 25 bar/365 psi rated, elastomeric-type, straight-through, Y-type-body valve. The valve shall have an unobstructed flow path, with no stem guide or supporting ribs.

Valve actuation shall be accomplished by a single-piece, rolling diaphragm bonded with a rugged radial seal disk. The diaphragm assembly shall be the only moving part.

The deluge valve shall include a relay pilot valve, a Y-type strainer, a ball drain valve, an automatic drip-check with manual override, 4-inch pressure gauges, and a manual emergency release housed in a stainless steel box.

The valve drain socket shall be flanged and have 360-degree swivel. The valve shall be equipped with two limit switches. Removing the valve cover for inspection or maintenance shall be in line and not require removal of the control trim.

The deluge valve and its entire control trim shall be supplied pre-assembled and hydraulically tested by a factory certified to ISO 9000 and 9001 standards.

Technical Data

Available Sizes (inch)

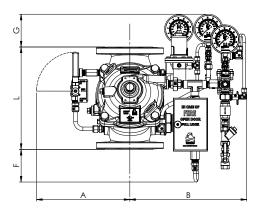

- Flanged 1½, 2, 3, 4, 6, 8, 10, 12, 14 & 16"
- Grooved 2, 3, 4, 6 & 8"
- Threaded 1½ & 2"

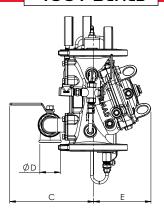

Pressure Rating

- ANSI#150 16 bar / 235 psi
- ANSI#300 25 bar / 365 psi
- Grooved/Threaded 25 bar / 365 psi

Temperature Rating

- 60°C / 140°F with NR elastomers (standard)
- 90°C / 194°F with EPDM elastomers
